

Abstract of the Disclosure

A composition of matter with edible substrate (paper), edible ink, edible sticker, utilizing Catnip oil or particles, and utilizing edible ink for color both of which are printed onto the sticker surface. The edible sticker utilizes non-toxic, edible, dyes to create color used for colored images. These adhesive stickers attract felines through the use of a chemical additive, the aromatic oil (or essence) of the herbaceous plant catnip which is absorbed into the sticker paper along with the dye to create images that can then be peeled off and placed on objects for the amusement of the feline.
